

# You're more fragile than you think!

Dear employee,

It's not breaking news that eggs break easily. But have you ever realized that we might be equally "breakable"?

This year's campaign draws the comparison and with a twist focuses on everyday risks at work. Wearing adequate personal protective equipment can make the difference!

From the refrigerator into the oven; eggs tend to undergo quite some differences in temperature, and protected only by their fragile shell, they usually pay for it with their lives. The hazards in the workplace are not the same as those in the kitchen, but you are more fragile than you think! Perhaps you have flame-retardant clothing that you have worn for years and that has been washed regularly.

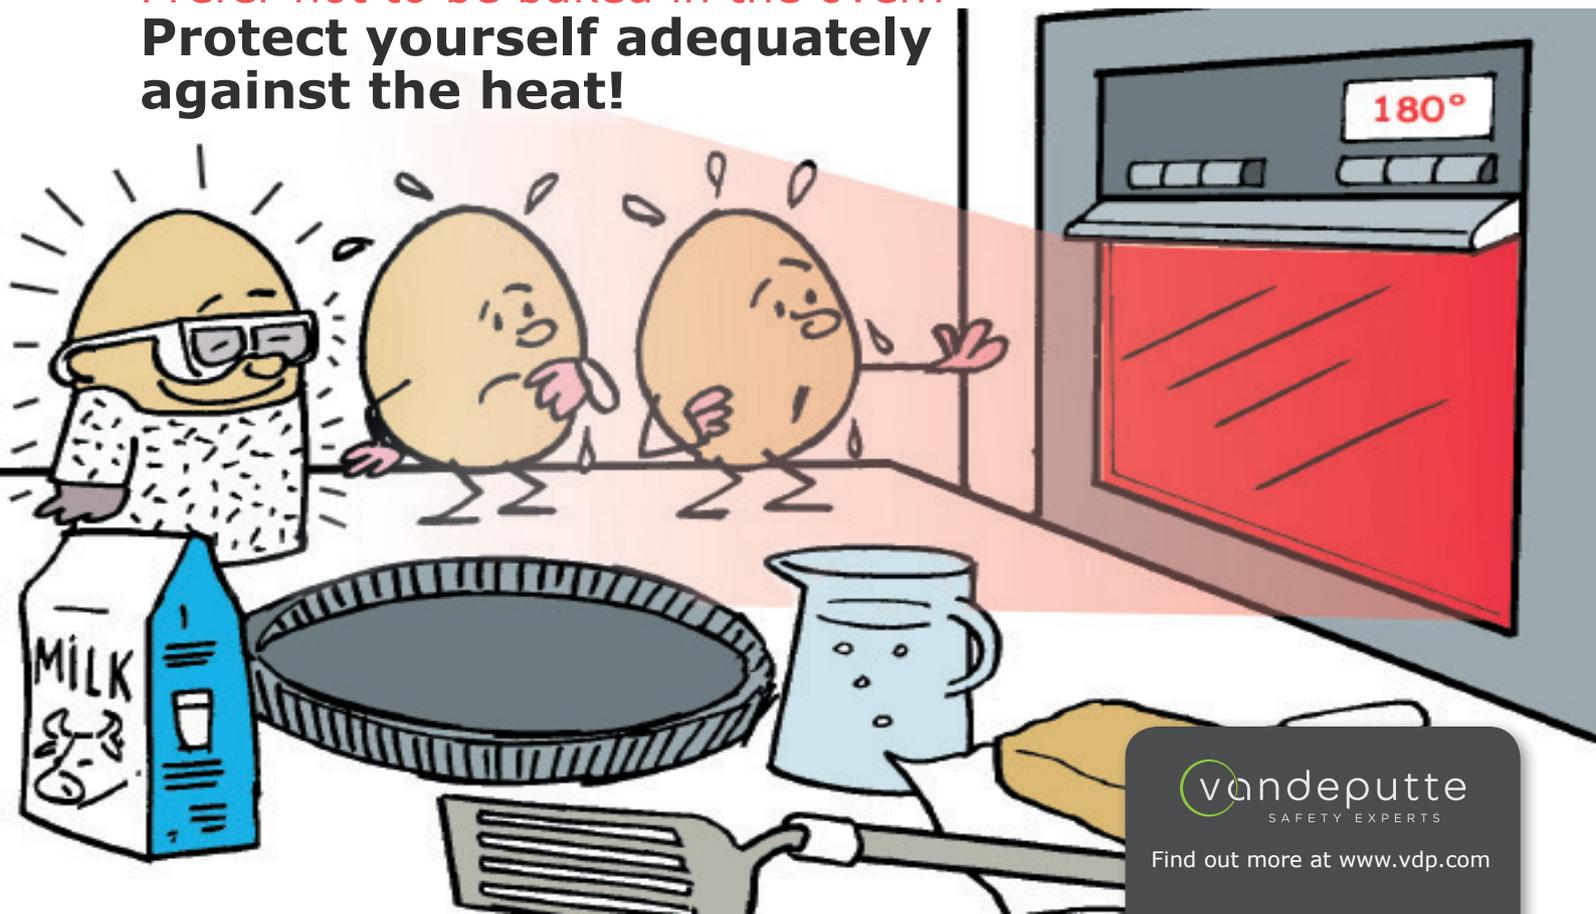

But did you know that not all flame-retardant clothing remains as effective after all those washes, compared to when it was new? Certain types of material have been chemically treated to make them flame-retardant. However, frequent washing can result in the garment losing this feature. So take a close look at the label and replace your flame-retardant clothing when necessary.

So protect yourself and be aware of all the risks that surround you, wherever you are or go, at home or at work.

Kind regards,

The board
